

Want to do it yourself?.....

We can help you get going in the right direction.

We can:

- * Develop a plan

- * Help select the appropriate plant material.

- * We can even deliver it to your site.

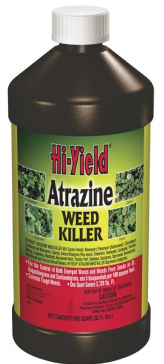

Prepare your lawn for spring

A little work now, while your grass is dormant, will be very beneficial come spring. Now is the time to spot treat the weeds in your lawn. By spraying while your grass is dormant, you are able to treat your pesky weeds directly before new growth develops this spring.

A mixture of Atrazine and Weed Free Zone (and a spreader sticker) sprayed on your lawn will give you a weed free lawn this spring.

Atrazine controls both emerged grassy weeds as well as weed from seed in St. Augustine and Centipede grass.

Weed Free Zone controls over 80 of the most common and toughest to control broadleaf weeds like clover, ivy, but-tonweed, and Bermuda grass.

Both of these products are available at Plant Tech

Easy Irrigation

A drip irrigation system can make your spring and summer watering much easier.
