

Time to prune
Sasanquas & Knock
Out Roses

Cut back knockout roses 3 times a year to have full, bloom filled shrubs. Cut them as soon as they are done blooming. Don't be afraid to cut them hard this time of year. Pruning allows the roses to flush out and become full.

Before

After

Cut your roses at your desired height and fertilize!

The Package Deal from the January Newsletter is still available!!

— Spring Application —

← Lawn Weed and Feed

GroSmart Lawn Fertilizer →

LAWN:

The most important thing you can do for your lawn is feed it! A well-fed lawn can better withstand heat, cold, drought, mowing, foot traffic and other stresses. Feeding your lawn in the spring strengthens roots, fights

against weeds and provides a good start for the heavy growing season. If you sprayed your weeds in January; fertilize your yard with the GroSmart spring fertilizer program. Apply Ferti-Lome weed and feed AFTER you have cut your lawn twice.

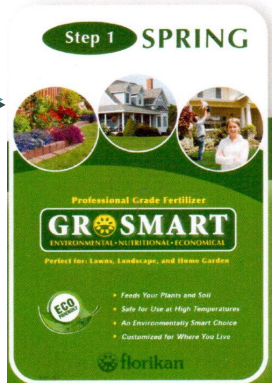

BEDS, SHRUBS AND TREES:

Fertilizers contain Nitrogen, Phosphorous, and Potassium. In simple terms that means it greens up your plants, stimulated blooms and enriches the roots.

We recommend Florikan 12.6.6. It is a great 3 month, all purpose, slow release fertilizer. This should be applied to your flower beds, as well as any trees, shrubs and seasonal color.

You should fertilize your lawn and shrubs **3 times** a year with these slow release granular products. **MARCH / JUNE/ SEPTEMBER**

ALL of these products are available at [Plant Tech](#)

Stop weeds and bugs before they happen

← Dimension is a pre-emergent herbicide that prevents weed seeds from germinating in your flower beds. **Sprinkle over your existing beds every three months** year round. Spring, Summer, Fall

→ Bug Blaster is a granular insecticide that should be applied to your flowerbeds and yard to keep out most bugs and insects.

Includes: Ants, Grubs, Fleas, Ticks and Chinch bugs
