

**Spring Annuals,
Perennials and
Vegetables**

**Available
mid-March**

Time to Prune your
Camellias
Cut when they are
done blooming and
apply a slow release
fertilizer.

MAKE YOUR PLANTS GREAT AGAIN!

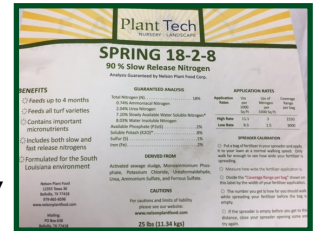

Now is the time to get in your yard

Fertilizers, Insecticides, Herbicides and Pre-Emergents

LAWN:

The most important thing you can do for your lawn is feed it! A well-fed lawn can better withstand heat, cold, drought, mowing, foot traffic and other stresses. Feeding your lawn in the spring strengthens roots and provides a good start for the heavy growing season.

******If you sprayed your weeds in January fertilize your yard with the Plant Tech spring step 1**

Lawn Weed and Feed is also available at Plant Tech

Apply a weed and feed product AFTER you have cut your lawn twice.

TREES AND SHRUBS:

Feed your plants, they are hungry!! We recommend a slow release 13.6.6 on all your trees and shrubs. If your plants show signs of Lichen, a mossy gray fungus on the bark, FEED THEM! This is a sign of stagnant growth and no fertilizer.

Stop weeds and bugs before they happen

Dimension is a pre-emergent herbicide that prevents weed seeds from germinating in your flower beds and lawn. **Apply to your existing beds every three months year round for best results.**

Bug Blaster is a granular insecticide that should be applied to your flowerbeds and yard to keep out most bugs and insects. Controls Fleas, Fireants, Ticks, Mole Crickets, Chinch Bugs and many more.

-Prevent SOD WEB WORMS before they destroy your lawn.
